Sahlbergia

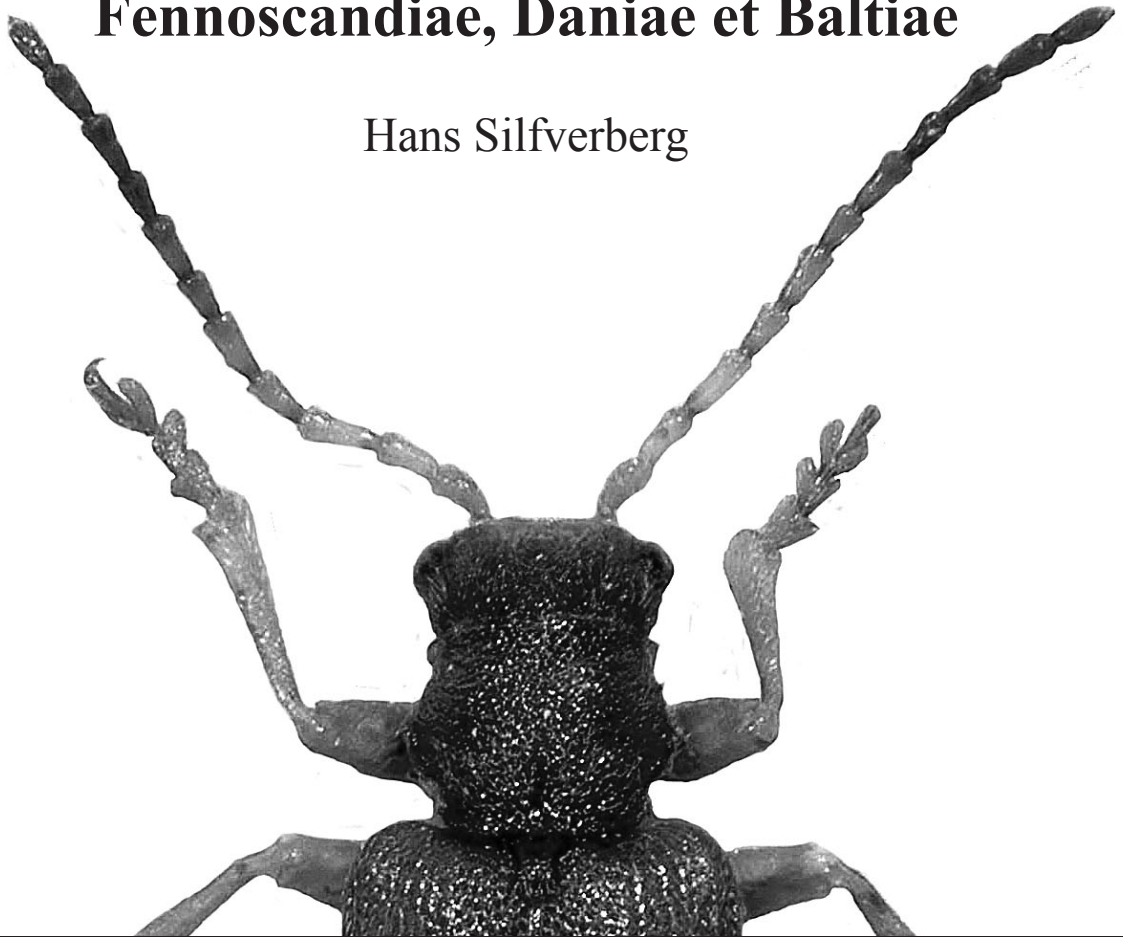

Vol. 16(2) 2010

ISSN 1237-3273

Sahlbergia on hyönteistieteellinen aikakauslehti, joka julkaisee Itä-Fennoskandian ja sen lähialueiden hyönteisfaunaa (mukaan lukien myös muut maaniveltä jalkaiset) ja lajien elintapoja käsitteleviä lyhyehköjä kirjoituksia sekä kirja-arvosteluja, tiedusteluja ja vastaavia. Kirjoitukset voivat myös olla yleistajuisia katsauksia ja selostuksia muualla tieteellisesti julkaisuun tuihin. Lehden pääasiallisina julkaisukielinä ovat suomi ja ruotsi (englanninkielisellä tiivistelmällä); myös englanninkielisiä kirjoituksia voidaan hyväksyä, mutta tällöin suomen ja/tai ruotsinkielinen tiivistelmä on välttämätön.

Ennen painatusta käsikirjoitukset läpikäyvät asiantuntijatarastuksen. *Kirjoittaja vastaa kielentarkastuksesta*. Eripainokset lähetetään kirjoittajille digitaalisessa muodossa (Portable Document Format, PDF).

Sahlbergia är en entomologisk tidskrift som publicerar kortare artiklar som behandlar Ostfennoskandiens och dess närområdens insektfauna (inklusive andra landleddjur), arternas levnadssätt, samt även bokrecensioner, förfrågningar o.d. Artiklarna kan även vara populärvetenskapliga översikter eller referat av vetenskapliga arbeten publicerade i andra tidskrifter. Tidskriftens huvudsakliga språk är finska och svenska (med en engelskspråkig resumé); även engelskspråkiga artiklar godkänns, men då är en finsk och/eller svenskspråkig resumé nödvändig.

Hans Silfverberg

Silfverberg, H. 2010. Enumeratio renovata Coleopterorum Fennoscandiae, Daniae et Baltiae. – *Sahlbergia* 16(2): 1-144. Helsinki, Finland, ISSN 1237-3273.

A new check list of Northern European Coleoptera is presented. Changes to the previous one bring this list closer to the recently published Palaearctic catalogues, and include new distributional information for numerous species.

Johdanto

Edellisen pohjoismaisen kovakuoriaisluettelon ilmestymisestä on kulunut kuutisen vuotta, mutta muutoksia on jo runsaasti. Suuri osa systematiikan ja nimistön muutoksista perustuu äskettäin ilmestyneisiin palearktisten kuoriaisten luetteloihin (Löbl & Smetana 2003-2010), muista muutoksista ilmoitetaan erikseen. Eräät Suomelle uudet lajit on tähän mennessä vain ilmoitettu sähköisesti (Suomen kuoriaisatlas ++/Atlas över Finlands skalbaggar / Atlas of the beetles of Finland 1-4 (Albrecht *ym.* 2010 a-d).

Maat ilmoitetaan samoin kuin ennen, näin ollen F = Suomi, K = Venäjän fennoskandiset osat, S = Ruotsi, N = Norja, D = Tanska, E = Viro, A = Latvia ja I = Liettua (Karta, s.144); luetteloon otetut importtilajit ilmaistaan kyseisen maan pikkukirjaimella. Yläindeksinumerolla^(xyz) osoitetaan lajit, joista on lisätietoja. Lisätiedot on lueteltu kirjoituksen lopussa.

Förord

Det är drygt sex år sedan den senaste nordiska skalbaggskatalogen publicerades, men talrika förändringar kan observeras. Förändringarna inom systematik och nomenklatur bygger framför allt på de nyligen publicerade palearktiska skalbaggskatalogerna (Löbl & Smetana 2003-2010), andra förändringar motiveras separat. Vissa för Finland nya arter har tills vidare bara anmälts elektroniskt (Albrecht *et al.* 2010 a-d, Suomen kovakuoriaisatlas).

Länderna anges på samma sätt som förr, sålunda är F = Finland, K = de fennoskandiska delarna av Ryssland, S = Sverige, N = Norge, E = Estland, A = Lettland och I = Li-

tauen (Karta, s.144); medtagna importarter anges med liten bokstav för respektive land. Referensnummer^(xyz) anger de arter, om vilka tilläggsinformation ges.

Introduction

The former check list (Silfverberg 2004) is only six years old, but numerous changes have already been made. The changes in systematics and nomenclature are largely based on the recently published Palaearctic catalogues (Löbl & Smetana 2003-2010), other changes were mentioned earlier (Silfverberg 2006), or are now explained in the end of this catalogue as separate notes, with references to relevant works. Most of them consist of new records from the included countries, but also taxonomic and nomenclatural changes. Some recent additions to the Finnish fauna have so far only been reported electronically in a mapping project (Albrecht *et al.* 2010 a-d, Suomen kovakuoriaisatlas).

The countries are shown the same way as before, i.e. F = Finland, K = the Russian parts of Fennoscandia, S = Sweden, N = Norway, D = Denmark, E = Estonia, A = Latvia and I = Lithuania (Map, p.144); lower case letters indicate accidental imports (only more frequent ones are included). Superscripted numbers^(xyz) indicate species for which additional information is provided at the end.

The arrangement of families has not changed from the previous list, within the families there are occasional changes. Recently some large genera have been divided quite radically, but I prefer to see how lasting these fragmentations turn out to be.
